Contents

Information Systems in Health Care and Medicine

Applications, Implementations, Projects

- A Matrix-Approach Proposal for the Treatment of Contents to be Integrated into
Multimedia Health Resources for Citizens, *A. Alonso, C. Díaz and F. Sanz* 3
- Expanding DIOGENE with a Clinical Information System Based on a New
Hospital-Wide Clinical Finding Dictionary, *C. Bréant, F. Borst, D. Campi,
V. Griesser and H.S. Le* 7
- Metabolic Drug Pointing and Information Processing, *R. Hofestädt, U. Mischke,
M. Prüß and U. Scholz* 12
- MedicDAT - Making Information Available, *C.-M. Reng, A. Tsakpinis
and J. Schoelmerich* 16
- How to Structure Clinical Information: A Practical Example, *R. Schweiger, T. Bürkle,
F. Köhn and J. Dudeck* 20
- Hospital Information Systems: Chances and Obstacles on the Way to Integration,
R. Lenz, R. Blaser and K.A. Kuhn 25
- A Simulation of Dynamic Tasks Routing to Improve Cooperation in Intensive Care
Units, *J.-M. Renard, N. Bricon-Souf, J.-M. Geib and R. Beuscart* 31
- A Prototype of an Information System for Assessing the Health Status of Prison
Inmates, *A. Duhamel, E. Archer, P. Devos, M.C. Nuttens and R. Beuscart* 37
- ArchAIDS Connects a Clinical Department and a Virological Laboratory to Automatize
the Follow Up of AIDS Patients, *M. Giacomini, C. Ruggiero, I. Martini,
J.L. McDermott and O.E. Varnier* 42
- An Information System on Toxicological Risks Linked to Drug Manipulation,
E. Pourabbas, N. Mucci, R. Maceratini and M. Rafanelli 46
- Outpatient Health Care Statistics Data Warehouse - Implementation, *D. Zilli* 50
- Implementing HISA Standard in the Middleware Layer of our Applications, *N. Planinc,
B. Berčič and M. Pikec* 55

Databases

- European and Latin-American Countries Associated in a Networked Database of
Outstanding Guidelines in Unusual Clinical Cases (ELCANO), *C. Ohmann,
H.P. Eich, J.J. Sancho, C. Diaz, G. Faba, N. Oliveri, S. Clamp, J.M. Cavanillas
and E. Coello* 59
- A Uniform Database of Rehabilitation as a Basis for Evaluating the Outcome Quality,
S. Flierl, B. Alt, K. Hornig and E. Jacobi 64
- A Unified Framework for Data Modeling on Medical Information Systems, *J. Neves,
P. Cortez, M. Rocha, A. Abelha, J. Machado, V. Alves, S. Basto, H. Botelho
and J. Neves* 68
- Preliminary Study on Relevant Data for Health Management in Hospitals,
S. Brusaferrero and M. Scarbolo 72

An Approach for Access Differentiation Design in Medical Distributed Applications Built on Databases, <i>S.K. Shoukourian, A.M. Vasilyan, A.A. Avagyan and A.K. Shukurian</i>	78
Integrated Databases - The Foundation for the Information Linking of the Actors in the National Health Care and Health Insurance Systems, <i>T. Marčun and F. Košir</i>	83
Compulsory Health Insurance Databases, <i>J. Svoljšak and I. Dovžan</i>	89
Database for Gynecological Laparoscopy, <i>E. Bernad, S. Bernad and I. Munteanu</i>	95
<i>Evaluation</i>	
Application Report: Preliminary Evaluation of the T-IDDM Project in Pavia, <i>R. Bellazzi, A. Riva, S. Montani, C. Larizza, M. Bestazza, S. Fiocchi, G. d'Annunzio, R. Lorini and M. Stefanelli</i>	99
Lesson Learnt from a Halt of the Hospital Information System, <i>M.C. Mazzoleni, P. Baiardi and I. Giorgi</i>	102
Selection of Hospital Information Systems: User Participation, <i>J. Stausberg</i>	106
The Use of the Balanced ScoreCard (BSC) in the Model for Investment and Evaluation of Medical Information Systems, <i>K.U. Niss</i>	110
HIS Purchase Project: Preliminary Report, <i>M. Madjaric, W. Leodolter, H. Leitner and G. Gell</i>	115
<i>Reports About National HIS</i>	
The Survey of Health Care Software in Yugoslavia, <i>D. Grbic, S. Simic, J. Marinkovic, N. Kocev and B. Matijevic</i>	121
Developing a Health Care Information System for Scotland, <i>M.H. Williams, G. Venters, G. Venters and D. Marwick</i>	125
Paediatric Case-Mix of the Lorraine Regional Database in 1994 and 1995, <i>P. Gillois, H. Garin and F. Kohler</i>	129
Introduction of a New Hospital Information System at the Innsbruck University Hospital, <i>V. Callegari, K.P. Pfeiffer and G. Lechleitner</i>	135
The Health Management Information System of Romania, <i>D.D. Farcas</i>	140
National Information System on Hospital Treatment, <i>G. Raič</i>	146
An IT Awareness Programme for the Health Sector in Ireland, <i>J. Grimson, M. Flahive, W. Grimson, R. O'Moore, J. Nolan and G. Chadwick</i>	151
Slovenian National Health Insurance Card: The Next Step, <i>T. Kalin, G. Kandus, D. Trcek and B. Zupan</i>	156
Transformation of the Process of Administrative Patient Management, <i>M. Črv</i>	161
National Health Care Providers' Database (NHCPD) of Slovenia - Information Technology Solution for Health Care Planning and Management, <i>T. Albreht and M. Paulin</i>	165
<i>Theory, Models, Human Aspects</i>	
A Unified Model to Support an Information Intensive Health Care Environment, <i>C. Burdis, B. Eaglestone and P. Procter</i>	171
Human Aspects of Medical Computer Application, <i>G. Lakner</i>	175
An Architecture for Bridging between Research and Practical Use in Health Informatics, <i>S.K. Andersen, C. Nøhr, K. Bernstein and S. Vingtoft</i>	179
The Bridge between Administrative and Clinical Information System, <i>F. Borst, C. Bréant, D. Campi, S. Momjian, P. Rossier, G. Thurler, C. Revillard and R. Baud</i>	185

Research Needs and Priorities in Health Informatics - Early Results of a Delphi Study, <i>J. Brender, P. McNair and C. Nøhr</i>	191
Success Factors of Hospital Information System Implementation: What Must Go Right?, <i>V. Prijatelj</i>	197

Telemedicine and Telematics

Applications

The Community Social Alarm Service as a Primary Health Care Service, <i>D. Rudel, M. Premik and N. Licer</i>	203
Psychiatry by Videophone: A Trial Service in North West England, <i>C.R. May, N.T. Ellis, T. Atkinson, L. Gask, F. Mair and C. Smith</i>	207
Telepathology and Imaging Spectroscopy as a New Modality in Histopathology, <i>S.G. Vari, G. Müller, J.M. Lerner and R.-D. Naber</i>	211
Transtelephonic ECG in Slovenia, <i>V. Gorjup, A. Jazbec and B. Geršak</i>	217
Southern Health Board - Advanced Telematic/Telemedicine in Healthcare Services in the South West of Ireland, <i>U.M. O'Sullivan and J. Somers</i>	223

Consulting

Using IP-Videoconferencing Systems in a Surgery Consulting, <i>N. Halin, P. Loula, P. Jaatinen and P. Aarnio</i>	229
Teleconsultation for Endoscopic Diagnosis of Gastrointestinal Diseases - Concepts and Architecture of the Service ENDOTEL, <i>T. Balbach, H. Sußmann, T. Jansen, H.-D. Allescher and A. Horsch</i>	234
Electronic Consultations and Referrals in Kymenlaakso Hospital District, <i>E. Läike, T. Koivu, R. Järvinen and A. Ahtola</i>	238
The Hip Status: A Telemedical Application, <i>D. Smrke, G. Cerkvenik, D. Piškur-Kosmač and V. Stankovski</i>	241
The Telemedicine and Second Medical Opinion, <i>B. Gersak, V. Gorjup and A. Jazbec</i>	245

Networks, Communications

Computerized System for the Networking of Health Services (Proposed Solution for the Informational Support of the Health Insurance Law in Romania), <i>M. Teseleanu, V. Afteni, M. Sucholotiuc, L. Stefan and I. Dobre</i>	247
End-User Point of View to Establish Real-Time Broadband ATM Connection over Europe, <i>P. Loula, T. Lummevaara, J. Ilola and P. Aarnio</i>	251
Real-Time Medical Applications and Telecommunications, <i>M. Štravs</i>	257
Barriers for Dissemination of a National Health Care Data Network: A List of Recommendations for Better Dissemination, <i>I. Johansen and L. Kaalund Thiel</i>	262
Regional Health Care Networks, <i>M. Bruun-Rasmussen, K. Bernstein, S. Vari and B. Bercic</i>	265

Telemedicine

Teleradiology as a Seed of the Regional Health Care Intranet in a Rural Region in Spain, <i>J.P. de Castro, R. Hornero, A. Alonso, B. Medina, R. Mompó, E. Abril and M. López</i>	270
Teledermatology - UK Experience of Setting Up an Integrated Teledermatology Service, <i>M. Clarke, R.W. Jones, D. Lioupis, S. George and D. Cairns</i>	274
Third Generation Electronic Pharmacy Communications, <i>K. Demkjær, I. Johansen</i>	

<i>and K. Bernstein</i>	278
Telemedicine in the Malaysian Multimedia Super Corridor: Towards Personalized Lifetime Health Plans, <i>S.S.R. Abidi and Z. Yusoff</i>	283
Security	
Communication Security in Open Health Care Networks, <i>B. Blobel, P. Pharow, K. Engel, V. Spiegel and R. Krohn</i>	291
Can a Database be Anonymous?, <i>C. Quantin, F.A. Allaert, P. d'Athis and L. Dusserre</i>	297
A Secure Web-Based Interface to Maternity Records with Decision Support, <i>M.H. Williams, O. Liew, K. Boddy, A. Varias and M. Eydmann</i>	302
Personal Identifying Number as a Unique Patient Identifier in Database on Clinically Treated Patients in Belgrade: Its Use, Advantages and Drawbacks, <i>A. Saulic, J. Marinkovic, S. Simic, N. Kocev and N. Marjanovic</i>	306
Experiences with a New Security Standard for Healthcare Information Systems, <i>K. Louwerse, M. van Ditmarsch and E. Flikkenschild</i>	311
Authorisation & Security Aspects in the Middleware-Based Healthcare Information System, <i>J. Andany, C. Bjorkendal, F.M. Ferrara, J.-R. Scherrer and S. Spahn</i>	315
Biomedical Processing, Data Analysis and Image Processing	
Bias in Meta-Analysis and Funnel Plot Asymmetry, <i>B. Milicic, J. Marinkovic, B. Jeremic and M. Radotic</i>	323
Developing Shared Understanding through Simulation, <i>N. Hardiker and S. Kay</i>	329
Data Integration to Assist Gastric Emptying Data Analysis, <i>M. Giacomini, C. Ruggiero, P. Borro and C. Mansi</i>	335
Three-Dimensional ROIs in Brain PET, <i>J. Mykkänen, M. Juhola and U. Ruotsalainen</i>	339
A Computerized Study of the Results of In-Vitro-Fertilisation, <i>J. Cadman, B. Richards, S. d'Souza, B.A. Lieberman, P. Buck and E. Rivlin</i>	343
Uniforming of Outpatient Health Care Statistics, <i>M. Rogač and D. Moravec Berger</i>	347
Application of Space Technologies for Valuation of a Stress Level, <i>O.Y. Mayorov and R.M. Baevsky</i>	352
An Efficient Algorithm for Automatic Decoding of ECG Signals, <i>E.A. Palamarchouk</i>	357
Frequency Domain Methods for Measurement of Heart Rate Variability, <i>M. Bulica and V. dan Moga</i>	359
A Signal Analysis Method for Impulse-Like Eye Movements, <i>M. Juhola, H. Aalto and T. Hirvonen</i>	365
Lossless Compression of Eye Movement Signals, <i>T. Tossavainen, M. Juhola and A. Koski</i>	369
Use of Time-Variant Coherence as a General Tool for Analysis of Interrelations between Brain Electrical Processes, <i>H. Witte, M. Arnold, W. Miltner, T. Rosburg and C. Schelezn</i>	374
Computer EEG-Monitoring of Laserotherapy Effects in Patients with Asteno-Depressive Syndrome, <i>V.P. Omelchenko, I.S. Baranchook and M.N. Dmitriev</i>	380
Parametric Time-Varying Spectrum and Its Application to SEMG Signals, <i>D. Korošec</i>	385
Monte Carlo Simulation of the Radiographic Imaging Procedure for Electronically Designed Phantoms, <i>D. Lazos, Z. Kolitsi and N. Pallikarakis</i>	391

Computed Tomography Image Analyzer: Segmentation Applying Active Contour Models - "Snakes", <i>R. Maksimovič, S. Stankovič, D. Milovanovič, J. Marinkovič, B. Goldner, M. Janičijević and P.M. Seferović</i>	395
A New Way for the Analysis of the Exocytosis, <i>J.L. Sánchez, M.A. Brioso, F. Segura and R. Borges</i>	400
Data Warehousing, Data Mining and Knowledge Discovery	
Knowledge Discovery for Advanced Clinical Data Management and Analysis, <i>A. Babic</i>	409
Application of the Medical Data Warehousing Architecture Epidware to Epidemiological Follow-Up: Data Extraction and Transformation, <i>E. Kerkri, C. Quantin, K. Yetongnon, F.A. Allaert and L. Dusserre</i>	414
Statistical Approaches for Evaluation of Genetic Risk Factor of Peripheral Arterial Occlusive Disease, <i>J. Svatoš, M. Orendáč, B. Mušková, J. Hyánek, V. Kožich and J. Zvárová</i>	419
Data Warehousing as a Basis for Web-Based Documentation of Data Mining and Analysis, <i>J. Karlsson, P. Eklund, C.-G. Hallgren and J.-G. Sjödin</i>	423
Treatment of Missing Values with Imputation for the Analysis of Otologic Data, <i>J. Laurikkala, E. Kentala, M. Juhola and I. Pyykkö</i>	428
Data Warehousing as a Tool for Quality Management in Oncology, <i>S. Hölzer, A.G. Tafazzoli, U. Altmann, W. Wächter and J. Dudeck</i>	432
Naive Bayesian-Based Nomogram for Prediction of Prostate Cancer Recurrence, <i>J. Demšar, B. Zupan, M.W. Kattan, J.R. Beck and I. Bratko</i>	436
Increasing the Diversity of Medical Data Mining through Distributed Object Technology, <i>M. Holeňa, A. Sochorová and J. Zvárová</i>	442
Outpatient Health Care Statistics Data Warehouse - Logical Design, <i>S. Natek</i>	448
Applying Data Mining in Healthcare: An Info-Structure for Delivering "Data-Driven" Strategic Services, <i>S.S.R. Abidi</i>	453
Quantitative Data Analysis for Exploring Outcomes in Cardiac Surgery, <i>A. Kircher, J. Antonsson, A. Babic and H. Casimir-Ahn</i>	457
Training and Education	
Post-Doc: Satisfying the Information Needs of General Practitioners in Continuing Medical Education and Daily Practice, <i>C. Dickmann, J. van der Baaren and K. Spitzer</i>	463
The Interactive Use of Networking Multimedia - Innovative Education Resource for Professionals and Patients, <i>H.K. Matthies, G.F. Walter, A. Brandis, A.C. Stan, A. Ammann, U. von Jan and A.J. Porth</i>	467
WWW as a Teaching Resource for Introductory Medical Informatics in Primary Care, <i>I.R. Young, P.J. McCullagh and W.G. Kernohan</i>	472
The Electronic Learning Zone in Health Informatics, <i>J. Bryant and T. Olsson</i>	478
Medical Informatics in the Medical Curriculum - When?, <i>J. Kern</i>	484
Communication between the Higher Education and Industry, <i>R. Dimitriu, M. Bazavan, R. Sima, D. Lungeanu and G. Mihalas</i>	489
CISMef: Catalogue and Index of French-Speaking Health Resources, <i>S.J. Darmoni, J.P. Leroy, F. Baudic, M. Douyère, J. Piot and B. Thirion</i>	493
Medical Informatics Educational Tasks Seen from Practical Perspective, <i>D. Lungeanu,</i>	

<i>R. Dimitriu, M. Bazavan, R. Sima, B. Richards, R. Neame, J. Murphy and G. Mihalas</i>	497
An Orthopaedic Discussion Group. Linking and Teaching the Orthopaedic Community, <i>I. Callanan, U. Gormalley and T. O'Brien</i>	500
Education and Training Possibilities in Europe for Chaining Ambulatory and Hospital Inpatients Care, <i>F.H. Roger France</i>	503
Globalisation and the Cultural Impact on Distance Education, <i>W. McPhee and C. Nehr</i>	508
Internet/Intranet	
<i>Knowledge Sharing</i>	
The Case-Based Internet Textbook ODITEB for Multi-Modal Diagnosis of Tumors - Development, Features and First Experiences, <i>A. Horsch, T. Balbach, M. Hogg, F. Sturm and C. Minov</i>	513
From Bridges to Super-Highways: Transmitting Meaning within and between Professions, and Across Time and Space - Beginning the Process, <i>A.J. Sheridan, M.J. Righy and R.J. Draper</i>	517
Are Healthcare Professionals Really Prepared to Deal with Information-Empowered Citizens?, <i>J. Roberts</i>	523
An Internet Implementation of an International Clinical Study, <i>R.A. Hollingsworth, C. Hay and B. Richards</i>	528
Accessing a WWW Reference Library of 3D Models of Pathological Organs to Support Medical Education, <i>M. Crudele, G.J. Clapworthy, F. Dong, M.A. Krokos, N. Vasilonikolidakis and G. Salcito</i>	532
<i>WWW</i>	
Sharing Electronic Medical Record on the WWW Using InterCare Architecture and Smart Cards, <i>M. Rotonen, P. Ruotsalainen, A. Kaskihalme and M. Aarnio</i>	538
The Need for Evaluation when Managing the IMIA.ORG Web-Site, <i>T. Kleinoeder, U. Jahn and O. Rienhoff</i>	543
WWW Search Engine for Slovenian and English Medical Documents, <i>J. Dimec, S. Džeroski, L. Todorovski and D. Hristovski</i>	547
Analysis of Free MEDLINE on the WWW, <i>E. Klemenčič and L. Todorovski</i>	553
Organization and Dissemination of Multimedia Medical Databases on the WWW, <i>L. Todorovski, S. Ribarič, J. Dimec, E. Hudomalj and T. Lunder</i>	557
<i>Other</i>	
GIN AUSTRIA: Assuring Quality and Relevance on Internet-Health-Information for Patients, <i>G. Göbel and K.P. Pfeiffer</i>	562
Generalisation and Extension of a Web-Based Data Collection System for Clinical Studies Using Java and CORBA, <i>H.P. Eich and C. Ohmann</i>	568
Evaluation of Medical Knowledge Using Electronic Textbooks and ExaMe Program on Internet, <i>J. Zvárová, K. Zvára Jr., P. Hanzlíček, J. Neustadt, P. Rošický, K. Buriánek, R. Augustinová and J. Prox</i>	573
A JAVA Implementation of a Medical Knowledge Base for Decision Support, <i>V. Ambrosiadou, D. Goulis, V. Shankararaman and G. Shamtani</i>	578
Java-Based Framework for the Secure Distribution of Electronic Medical Records, <i>A. Goh</i>	582

Resource Management

- NISPLAN - Projecting Hospital Beds and Hospital Stays, *S. Østerlund Petersen* 591
 Automated Computer-Assisted Evaluation of Diagnosis-and-Procedure-Reports in
 Austrian Hospitals, *E. Hagenbichler, D. Klingler, L. Neuner and K.-P. Pfeiffer* 594
 Healthcare Users and Computerised Resources, *G. Stephens, P. Gaffney*
and J. Grimson 600
 Bed Utilization Performances of Slovenian and Croatian Acute Hospitals Systems,
M. Premik, V. Mayer, M. Kuzman and M. Mayer 606
 The Optimization of Turnaround Time for Blood Samples in an Emergency Clinical
 Laboratory, *V. Prijatelj, A. Vučkovič and D. Černe* 610

Intelligent Medical Systems

Applications

- MOBISIM - Package for Simulation in Molecular Biology, *G.I. Mihalas,*
G. Macovievici, Z. Simon, G. Mihalas, G. Balea and D. Lungeanu 617
 Automatization of Physicians' Phone-In Hours, *J. Turunen, P. Loula and H. Soininen* 621
 AIDMAN - Advanced Informatics Distributed Medical Access Network, *M. Clarke,*
R.W. Jones, N. Kanellopoulos, D. Lioupis and A. Nassiopoulos 625
 Multimedia Stimulation for Psychophysiological Investigation, *P.J. McCullagh,*
G.P. Gent and H.G. McAllister 631
 Classification of Metabolic Patients Using Dynamic Variables, *S. Svacina, T. Haas,*
M. Matoulek and K. Nedelníková 636

Decision Support Systems

- Computer-Aided Diagnostic System in Dentistry, *D. Grošelj, M. Malus and I. Grabec* 639
 Supporting Decisions in Diabetic Patients Management through Case-Based
 Retrieval, *S. Montani, R. Bellazzi, L. Portinale, S. Fiocchi, G. d'Annunzio*
and M. Stefanelli 645
 An Integration System to Rapidly Identify Aquatic Bacteria, *M. Giacomini,*
S. Bertone, C. Ruggiero, F. Caneva Soumetz, A. Bisio, G. Odino
and L. Calegari 650
 A Diagnostic Advice System Based on Pathophysiological Models of Diseases,
W.J. ter Burg, P. Lucas and E. ter Braak 654
 Modelling Oculomotor Data with Decision Tree Induction, *K. Viikki, E. Isotalo,*
M. Juhola and I. Pyykkö 660
 A Decision Support System for Cholinesterase Genotyping, *B. Richards, J. Cadman*
and M. France 664
 Hierarchical Multi-Attribute Decision Models and their Application in Health Care,
M. Bohanec, B. Zupan and V. Rajkovič 670
 The Influence of Class Discretization to Attribute Hierarchy of Decision Trees,
Š. Hleb Babič, P. Kokol, M. Zorman and V. Podgorelec 676

Methods

- A Micropopulation Modelling of a Viral Epidemic by Using a Special Neural
 Network, *C.N. Zaharia and A. Cristea* 682
 Computer-Assisted Planning and Simulation of Hip Operations Using Virtual
 Three-Dimensional Models, *H. Handels, J. Ehrhardt, W. Plötz and S.J. Pöppel* 686

A Probabilistic Approach to Improved Antibiotic Therapy, <i>N. de Bruijn, P. Lucas, K. Schurink and A. Hoepelman</i>	690
Possibilities of See5 Software in Forecasting of Life Expectancy not Achieving, <i>S. Vuletić, J. Kern, Z. Sonicki and D. Ivanković</i>	696
Intelligent Systems in Medical Diagnosis, <i>B. Novak</i>	700
Power of Heterogeneous Computing as a Vehicle for Implementing E ³ Medical Decision Support Systems, <i>V. Podgorelec, J. Brest and P. Kokol</i>	703
Neural Network in Communication with Medical Computer System, <i>E. Kącki, J. Stempczyńska and R. Wawrzyniak</i>	709
<i>Theory</i>

²Institute of Biomedical Problems, Moscow, Russia

P.O.BOX 7313, Kharkiv 310 002, Ukraine. E-mail: uacm@kharkov.com

Abstract: The adaptation of large long-term experience of application Heart Rate Variability in space biology and medicine and medical researches is represented. The description of the new approaches is given which are fixed in a basis of diagnostic computer systems "NeuroResercher™ 5.0" (or System of Computer Vegetology "CardioTensionTest™ 5.0" as module in the frame of "NeuroResercher™ 5.0") and "Varicard". These systems for thorough clinical and experimental scientific investigations and experimental investigations (for specialists of R&D institutes, doctors of functional diagnosis rooms of hospitals possessing clinical bases of R&D institute and medical university chairs, during clinical and preclinical testing of drugs, medical and biological R&D institutes carrying out Nneurophysiological investigations in the field of labour medicine and sport medicine, development of infantile nervous system, medical education establishments.

1. Introduction

At the boundary of XX and XXI Centuries the significance of emotional stress on health of the people is promptly increased. In this connection the necessity in simple for realisation, scientific based methods of a quantitative evaluation of power of systems regulation of an organism increases. There is a necessity because of objective quantitative measurements of a level of emotional stress and reserves of regulation cardio-vessels systems regulation in time to apply the reasonable methods of treatment and preventive maintenance of stress-genesis diseases, to predict outcomes myocardial infarction or origin " of sudden death " on a hum noise of complete well-being.

The problem of valuation of a stress level of the space crewmembers has arisen from the most first steps of cosmonautics development. It solution was connected to development of the concept about cardiovascular system as an indicator of adaptive reactions whole body.

Since the 60-th years during the first human flights in space was developed the technology of researches, based on the heart rate variability analysis and valuation on these data of a autonomic system state and activity of subcortical centres, connected with psycho-emotional excitation and increasing the ergo-metabolic processes at physical loads. In the subsequent years the Heart Rate Variability analysis begins widely to be used in USSR (Russia and Ukraine) in clinical and preventive medicine, and from 80-th years has applied in Western Europe and USA. Hundreds articles and reports about using of the heart rate variability analysis in clinical practice and applied physiology are at present annually published.

However, so far in earthly medicine the space technology of stress level valuation is not enough used. The important of this technology is determined by that the majority of diseases is results of overstrain and exhaustion of the mechanisms of physiological functions regulation and diagnostics of a regulatory systems state is the most effective on Heart Rate Variability parameters.

Therefore in a space medicine 10-balls scale of valuations of a stress level is developed, that permits to determine risk of diseases and to supervise results of fulfilment of the preventive recommendations.

The adaptation of large long-term experience of application Heart Rate Variability has allowed to create computer diagnostic systems "CardioTensionTest™ 5.0" and "Varicard".

2. Functionality's of systems

These systems allow:

- To quantitatively evaluate the emotional stress rate;
- To quantitatively evaluate the "regulation stability" under extreme conditions;
- To evaluate the regulatory systems tension level reflecting the activation rate of neuro-endocrine of "stress axes";
- To carry out medical control and prediction of an organism's functional possibilities, to diagnose the following states: a) satisfactory adaptation; b) functional tension; c) unsatisfactory adaptation; d) adaptation failure.
- To determine the functional state of a heart rhythm regulation system according to R.M. Baevsky's classifier [1] pointing out five cardiac rhythm features: 1. Indication of summary effect of all regulatory influences; 2. Cardiac muscle automatism; 3. Regulatory influences on stability rate; 4. State and interaction of VNS parts (vegetative homeostasis); 5. Indication of subcortical nervous centres state.
- To evaluate arterial pressure regulation system activity (Ssw1);
- To evaluate thermal regulation system activity (Ssw2).
- "CardioTensionTest™ 5.0" and "Varicard" have substantial advantages over other available systems.

It is necessary to mark some important features of these systems, which increase reliability and reliability of results.

3. "CardioTensionTest™ 5.0"

3.1. Detection of R-peaks and R-R intervals

Reliable automatic discrimination of R-peaks is of primary importance. In the available systems R-peaks are discriminated by means of an electronic amplitude filter, i.e. An R-peak is discriminated from other ECG peaks (P, T) by its higher amplitude. Such approach has low reliability because under emotional stress, in the periods of negative emotional state, in cases of hypoxia and myocardial ischemia of different etiology, a T-peak amplitude significantly increases.

Besides, hardware-based discrimination of R-peaks does not permit to account for the presence of artifacts (spikes, displacements and other ECG distortions) [2]. At the same time, discrimination of only one "false" R-peak (or omission of a real R-peak) causes a nonlinear distortion of the analysis results by 60-80 times [1].

The stage of detection consists of two steps - on a first step of the analysis the system uses methods of automatic detection.

3.2. Automatic detection

Automatic detection of R - peaks (waves) and R-R- intervals - not hardware, but computer detection of R-waves according to three specially designed independent criteria.

An original algorithm is used for this purpose that makes it possible to reliably detect R-waves not only for clinical purposes at rest, but also for investigations of under the conditions of operator's activity - operators, pilots, sports persons etc., as well as animals under the condition of free behaviour in chronic experiment.

On second step of recognition R- peaks in the system the quality control of detection, and then semiautomatic and hand-operated correction is carried out.

3.3. Visual checking of R peak detection

Makes it possible to check up visually on the monitor screen the detected R-waves with further manual correction (detection or elimination) of 'false' or omitted R-waves in a defect section.

3.4. Automatic editing

Detection or elimination of 'false' or omitted R-waves in a defect section basing on the original correction algorithm.

3.5. Manual correction

Manual correction (insertion or elimination) of 'false' or omitted R-waves in a defect section (especially important when investigating the subjects (operators) during their activity or functional tests.

4. Mathematical and statistical analysis

The reliability of R-peaks selection ensures at a stage of a mathematical and statistical analysis high reliability of results. The universal analysis is carried out which allows evaluating practically all levels of regulation.

Calculation of a set of well known from the literature mathematical and statistical values (31 value) reflecting the result of statistical, correlation and spectral analysis of the cardiac rhythm. Integral interference-proof from the point of view of computer processing index AI (anxiety index) and ART (anxiety reaction type index) are used;

4.1 Correlation analysis

Sequences of R-R (N-N) intervals, that makes it possible to estimate the degree of control centralisation, domination of one of the vegetative nervous system sections, quantitatively estimate the degree of emotional stress;

4.2. Spectral analysis

Sequence of R-R (N-N) intervals that makes it possible to estimate the degree of activation of subcortical nervous centres controlling the blood flow regulation apparatus, measure the degree of stress of the neuro-endocrine function regulation apparatus;

Fig.1. Visualization of result - in the form of charts of R-R- (N-N) interval distribution histograms, correlograms and spectra; results of factor analysis, possibility to present in one chart and compare several states simultaneously.

4.3. Multidimensional factor analysis

Makes it possible to compress information and reduce a large number of values to 2-3 factors [3]. This approach makes it possible to range (quantitatively estimate and compare) the subjects as to the level of stress of the regulation systems, 'regulation stability'; quantitative estimate the state of integrative function of hypothalamus. The ranging results are output to a 3D chart. There is a possibility to create factor models for various age groups and contingents of the subjects [3].

Large advantage "CardioTensionTest™ 5.0" is the possibility of inclusion it in the structure of the developed advanced system of the computer EEG "NeuroResearcher™ 5.0". It allows simultaneously to conduct a research of an EEG, and to compare results to data of a calculus of Heart Rate Variability.

5. "Varicard"

"Varicard" is specialised hardware-software complex for the Heart Rate Variability analysis is at present developed, in which are used as western standards of this technique, as created in a space medicine criterion of stress level estimation. Is allocated three zones (Fig. 2)(green, yellow and red) determining danger of development of diseases. In a complex structure there is base of knowledge, forming individual preventive and healthcare

recommendation by results of valuation at stress level. The complex is tested in a number of clinical establishments, is used at mass preventive examinations of thousands people, as well as at investigation of the health in schools.

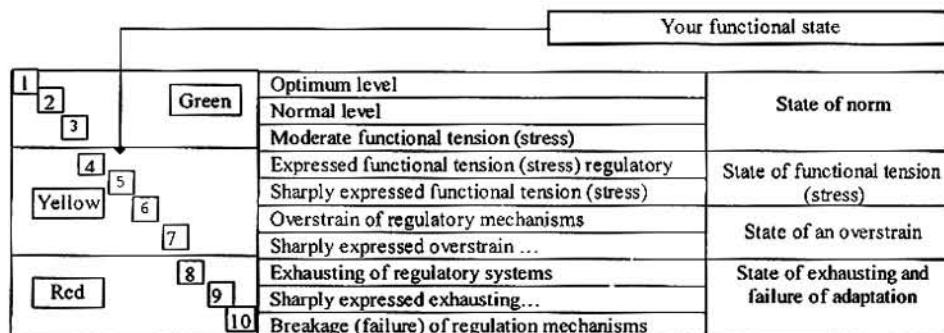

Fig.2. "A Ladder of states " and system of an evaluation of functional states of a type "Traffic Light".

6. Summary

The Heart Rate Variability analysis is modern technology of valuation of the health states in applied physiology, clinical practice, rehabilitation and preventive medicine. This technology was developed in space medicine as the method for stress level estimation. Widely application of this approach in different parts of human sciences is very important for understanding the unity and differences of the health and disease.
